## Ghanaian SMS Start Up Tackles Fake Drug Scourge

Congratulations to the Ghanaian tech company mPedigree for winning the Global Security Challenge start up award, it is a great example of very low-tech solution to very major problem.

After the awards I get to speak to Bright Simons, the man behind the ingenious system that is helping to tackle the serious blight of counterfeit drugs in Africa.

### Fighting Counterfeit Drugs With Mobile Technology

Counterfeit drugs are a huge problem in Africa and elsewhere. HP and the African social enterprise network mPedigree team up to help ensure patients that the medicine they're taking will cure them, not harm them.

HP and mPedigree, an African social enterprise network, announce today a new program that helps patients in Ghana and Nigeria verify that their medicines are genuine.

## **WIPO MAGAZINE: Toll-Free drug verification**

Mobile phone technology is also proving an effective means of safeguarding consumers against the scourge of counterfeit drugs. While it is difficult to calculate exact figures, the World Health Organization (WHO) estimates that more than 10 percent of medicines on the global market are fake, and that 25 percent of those in developing countries are counterfeit or substandard. Not only do these products claim lives on a daily basis, they increase resistance to pathogens and, as a consequence, place an even heavier burden on resource-constrained public health systems.

## The Economist: Poison pills

DRUG smugglers can expect harsh penalties nearly everywhere—if the drugs in question are heroin or cocaine. Those who smuggle counterfeit medicines, by contrast, have often faced lax enforcement and light punishment. Some governments deem drug-counterfeiting a trivial offence, little more than a common irritant. After all, whose spam filter does not groan with ads for suspiciously cheap “Viagra”?

## Yahoo: Africans text message to check if drugs are real

LONDON – For Africans wondering whether the malaria drugs they've bought are real, there may soon be a quick way of finding out: sending a text message.

Across the continent, more than 30 percent of malaria medicines are estimated to be fake, and many look identical to the real thing.

## **The Daily Maverick: Fighting Africa's fake-drugs monster**

With no money, but a wealth of innovation, Bright Simons created an SMS-based system that is helping Nigeria fight a deadly onslaught of counterfeit medicines. The remedy is so successful it is now being tested in Ghana, and considered by other African states, to stem an avalanche that's killing hundreds of thousands of people each year.
